Conservation

The Kalamazoo Nature Center is a not-for-profit organization whose mission is to inspire people to care for the environment by providing experiences that lead them to understand their connections to the natural world.

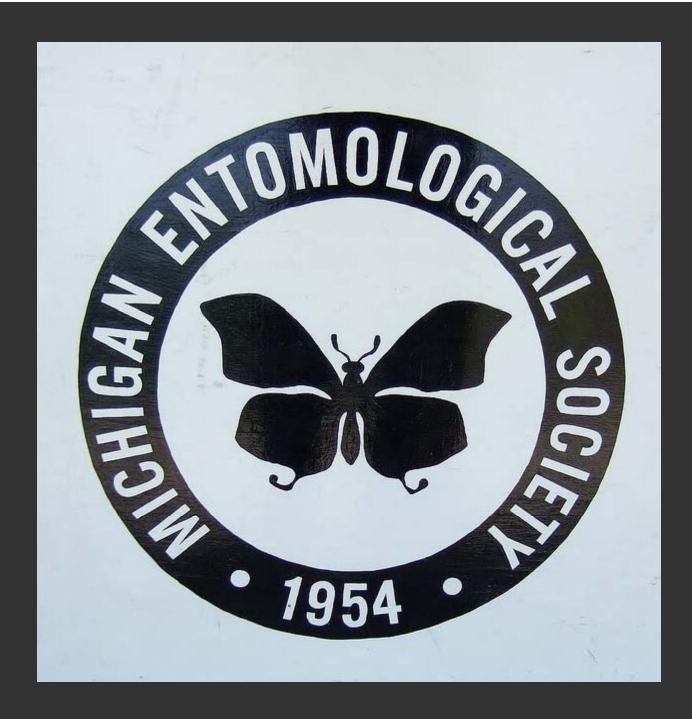

Why Now? Sudden and Rapid Declines

Worldwide

Regionally

Regal Fritillary – Speyeria idalia

- Extirpated in 15 states
- Imperiled in 5
- State Endangered in 4 states including MI, NY, OH, WI
- Threatened in IL
- No Federal Status
- Icon of Prairie Restoration

Regal Fritillary- Speyeria idalia

Getting the Word Out

The Nature Center is the perfect way for your group to gain a brand new appreciation for their place in the natural world.

Allow KNC's professional staff to involve your group in one of our many exciting guided programs. Don't see what you want? Ask for a custom-designed class!

Scouts can earn badges! See the website at www.NatureCenter.org for more program details and special fees.

Interested in exploring the site on your own? You can visit our interactive exhibits, enjoy the seasonal butterfly house and garden, and meet young farm animals at the barn. Our self-guided hiking trails invite you to discover 1,100 acres of woods, meadows, and wetlands.

Who live in a barn? It's not just the usual farm animals! Small wild animals also use the Nature Center's big barn. Meet real farm animals and learn about their favorite foods. Pet our gentle pony, furry bunny, and goofy goat. Then explore the area in search of the wild animals that find food and shelter in various nooks and crannies. Ages 4-7.

Students will choose which possessions to take in the limited space of a covered wagon. They will experience walking a dusty prairie trail and have the thrill of encountering new plants and animals. A team-building game will help them cross an imaginary river. Ages 6-10.

Fossil Hike

Fossil seashells and corals in Michigan? You bet! Learn how fossils are formed and why we find them here. Hike to the Nature Center's gravel pit and search for these buried treasures from ancient times. Ages 6-10.

Wonderful Wetlands

Hike to a marsh or river bottomland and learn about some fascinating wetland plants and animals. Then catch some amazing critters from a pond or stream and observe their adaptations to a watery world. Ages 6 and up.

Life on a 19th-century Michigan farm was hard work, but children did have time to play! Youngsters will do chores at a log cabin and explore an old farm house. Then they can test their wits with some old fashioned puzzles and try their motor skills with hoops and stilts. Ages 6-10.

Survival Skills

If your children were lost in the woods, would they know what to do? We'll help your kids learn basic "lost proofing" skills, including how to make a shelter or how to lay a fire. We'll also practice basic map and compass reading. Ages 8-12.

Geocaching - "High Tech Treasure Hunt"

Search for treasures at the Kalamazoo Nature Center! Geocachers use a Global Positioning System (GPS) and the Internet to assist them in navigating through areas in search of hidden objects. Learn the basics of the GPS unit and then test your skills by using it to find treasures hidden around the Nature Center

Incredible In They live under favorite flowers others prefer n have around! A

Kalamazoo Nature Center **Earth Day Celebration** Saturday, April 17 Free Admission Day

Kalamazoo Nature Center 7000 N. Westnedge Ave. Kalamazoo, MI. 49009

Where to Start

- WhoWhat
- When
- WhereWhy

Expectations/Hopes

- Stick with it Multiple Seasons per site
- 1 site per Monitor
- Minimum of 6 Runs per Season
- Establish a route
- Submit Data promptly
- Good Citizen NO COLLECTING

Site Assignment

- Close to home
- Personal preference
- We have suggestions link to other research
- Set Path May take you through more than one habitat

Basics of Field Work

- Safety First Pair Up
- Spotter/Monitor
- "Brain" or Recorder

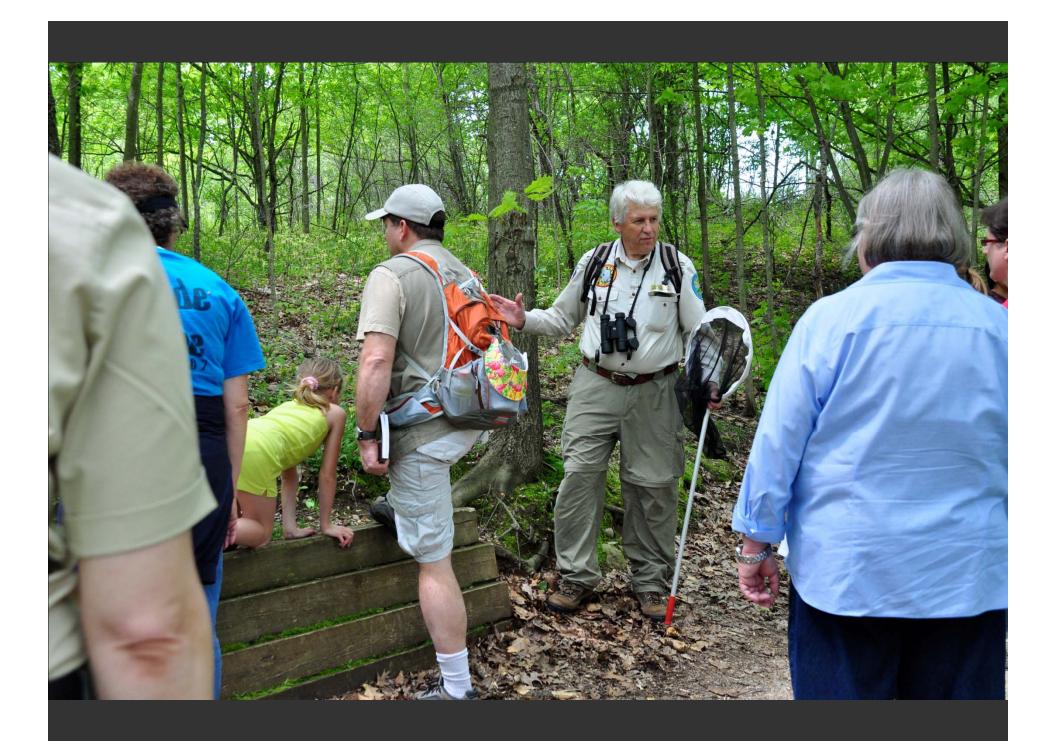

Don't Get Discouraged

- May take years to get a baseline
- Learning Curve!
- Learn BFs at your site and across season

Mourning Cloak

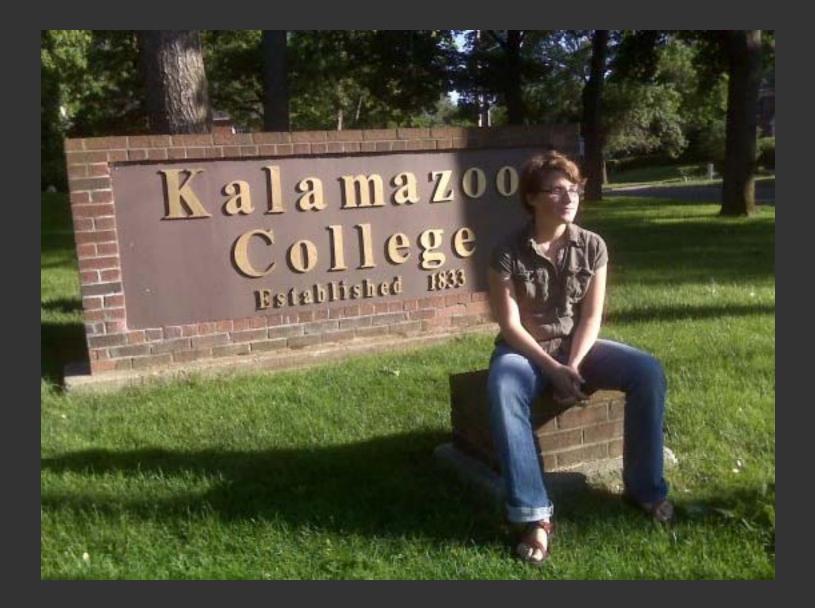

Row of blue spots (may be hard to see) Distinctive yellow edge

Typically the first butterfly of spring – overwinters as adult
